Fingerprint Readers for any Need

A Variety of Fingerprint Scanners and Fingerprint Sensor Technologies for Varying Industry Conditions

A wealth of experience across many real-world implementations has led us to extensively test and support multiple fingerprint scanners, ensuring that you have the right options for success.

The latest fingerprint reader introduced by M2SYS, the M2-EasyScan™ is a revolutionary, ergonomic fingerprint reader that ensures a consistent image quality, even in high throughput environments. Fueled by our award-winning Bio-Plugin™ fingerprint software, fingerprint recognition with this fingerprint scanner is permeating the commercial marketplace. In high throughput environments such as fitness club membership management or school lunch line POS, a fingerprint reader is required that will capture a high quality image and will not degrade with frequent usage.

The M2-EasyScan™ fingerprint scanner from M2SYS was designed with these goals in mind and is meeting these challenges with success. The ergonomic design of this fingerprint scanner ensures that a high quality image is captured with each scan. The hard, quartz-like sensor surface assures that this fingerprint reader will stand the test of time, even in high throughput settings.

The sensor of the M2-EasyScan™ fingerprint reader does not have a membrane, and therefore will not degrade or erode with frequent fingerprint scanning. Our fingerprint reader is easy to use and works well with dry fingerprints and fingerprints of smaller children; this feature is especially useful in school lunch lines or any type of school environments.

The M2-EasyScan™ is built to last, thus eliminating costly replacements. Additionally, the reader comes with a two-year warranty, one of the best in the industry.
